equilibri

PROJECTE

Love for nature

Projecte Equilibri was born in Mallorca with a very clear and strong mission: to contribute to the biodiversity of ecosystems on the island. In other words: it was born out of love for nature.

We have worked on a sustainable strategy to integrate alternating crops with the native wild flora. We help maintaining an intrinsic globally balanced and sustainable management of the farm.

Our organic honey, and our organic honeydew are of the highest quality! Our first harvest is a sign that we are on the right track, and the results reflects the values of **Projecte Equilibri**.

The organic and ecological products are just a part of this project; which is constantly growing and evolving, it brings together a lot of other concepts which are still to be structured.

Projecte Equilibri also aims to be a meeting point where knowledge can be shared, research projects put in place, and to also promote education and awareness about biodiversity and sustainability; always contributing to natural conservation and the proliferation of native fauna and flora. In this natural paradise where everyone aims for balance, each of us has a particular mission to fulfil.

Bees, our main protagonists, know their mission. As humans, we still need to define ours.

Spring honey

Projecte Equilibri's first organic Spring honey has a light amber colour. It comes from wild native flowers, such as wild thyme, sant pons herb and thistle, and a variety of cultivated flowers. It is a soft, delicate and floral honey

Carob honeydew

Projecte Equilibri's first Carob honeydew does not come from flowers but from the sugars secreted in the form of a drop at the tip of the carob when it matures and changes color. The bees, after a few months of poor flowering, go crazy for these sugars and delight us with this extraordinary carob honeydew with a dark amber colour. It is a honey which is persistent, with a pleasant texture and intense flavor and aroma.
